

ABSTRACT OF DISCLOSURE

An [The present invention relates to an] inner tightening mechanism adapted to equip an article of [a] footwear [(CH)] having a flexible or semi-rigid upper. The inner tightening mechanism includes a retention band that is connected to the inner surface of the upper by at least two anchoring points fixed on the lateral and medial sides, respectively, of the flexion in the direction of the heel, and at least one anchoring point is positioned substantially above the sole.

[The inner tightening mechanism includes a retention band (1) that is connected to the inner surface (a) of the upper (O) by at least two anchoring points (12, 22) fixed on the lateral and medial sides, respectively, of the flexion in the direction of the heel, and at least one anchoring point (12, 22) is positioned substantially above the sole (100).
